

Encounter Data Processing System (EDPS)

Our EDPS/RAPS solution receives, processes, transmits complete and compliant 837 data to CMS and applies responses automatically. This ensures compliance for Health Plans and strengthens their financial performance with improved insight and decision making.

Features

X12 transformation & edits

RAPS file creation & edits

Real-time dashboards & admin portal

Submission and coding gap analysis

Tracking and reconciliation

Import any file format; map and transform data into 5010 X12 837

Create RAPS file from encounter data submitted in EDPS

Web-enabled manual entry of RAPS data

Ability to delete CMS-accepted RAPS clusters and create delete transactions online

Ability to validate and edit RAPS data to minimize errors defined by CMS as avoidable rejects

Error correction analytics and processing

Web portal to view all encounters (Regular/Chart Reviews) and correct identified rejected encounters for re-submission

Benefits

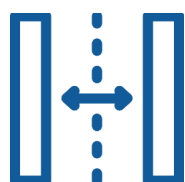

Rank and prioritize error correction activities by HCC

De-dup of RAPS clusters to meet CMS compliance

Quickly manage and interpret CMS error reports

Reconcile discrepancy gaps between Claims, EDPS, RAPS, MAO-002 and MAO-004

Perform HIPAA and CMS specific edits on encounter data before submission to CMS

Track diagnosis back to the source files and reconcile with CMS responses and reports
